

# Hiipoo ICC Profile Setup Checklist

Confirm your ink line, install the right profile, and fix the most common problems.

- ☐ Confirm which Hiipoo ink you have. Check your listing title for "ICC-Free / Autofill" versus "Free ICC Printing" or an included profile.
- ☐ If your listing says ICC-Free or Autofill, you don't need a profile. Skip to the test print step.
- ☐ If your listing includes a profile, go to [hiipoo.com](https://hiipoo.com) and download the file that matches your exact printer model.
- ☐ Windows: right-click the file and choose "Install profile," or copy it into C:\Windows\System32\spool\drivers\color.
- ☐ Mac: copy the file into ~/Library/ColorSync/Profiles.
- ☐ Fully close and reopen your design software after installing, not just the document.
- ☐ In the print dialog, select the installed Hiipoo profile and set your printer driver's color management to Off.
- ☐ Confirm your design file is in RGB, not CMYK, before printing.
- ☐ Run one small test print before committing to a full batch.
- ☐ Profile not showing up? Remove it, fully close the app, reinstall, then reopen and check again.
- ☐ Still off after all of this? Contact Hiipoo support directly with your exact model and a sample print.
